

Serial No.: 09/755,489
Attorney Docket No.: A0-079 US

at b2

~~a plurality of conductive terminals mounted in said terminal-receiving passages.~~

Add the following new claims 10-16:

Sub 32

~~10. (Newly added) An electrical connector housing, comprising:
an elongated body portion defining a front mating face and a rear terminating face, a
plurality of terminal-receiving passages defined by walls extending between the mating and
terminating faces, wherein the walls are of generally uniform thickness between the front mating
face and the rear terminating face.~~

11. (Newly added) The electrical connector housing of claim 10, wherein the walls
include outside walls.

a2

Sub 33

~~12. (Newly added) The electrical connector housing of claim 10, wherein the housing
includes enlarged end portions at opposite ends of said elongated body portion, the body portion
being of a generally uniform width and further being narrower than the end portions.~~

13. (Newly added) The electrical connector housing of claim 10, wherein the housing
is made of molded plastic.

Sub 34

~~14. (Newly added) The electrical connector housing of claim 13, wherein the molded
plastic housing includes enlarged end portions at opposite ends of said elongated body portion,
the body portion being of a generally uniform width and further being narrower than the end
portions.~~

15. (Newly added) The electrical connector housing of claim 10, wherein the housing
is a combination connector housing with the elongated body portion including a data section of
the connector housing and at least one of the enlarged end portions including a power section of
